AVIATION TURBINE FUEL (JET FUEL) CIVIL JET FUELS Aviation turbine fuels are used for powering jet and turbo-prop engined aircraft and are not to be confused with Avgas. Outside former communist areas, there are currently two main grades of turbine fuel in use in civil commercial aviation : Jet A-1 and Jet A, both are kerosene type fuels.

In November, 2014, Blue Heron Aviation opened its doors as the Next Generation of FBO's for the Turks and Caicos. In two short years it can honestly claim to have captured more than 50% of the discerning travelers coming to the islands and all through the hard work of its team of professionals - All of whom are born, bred and resident to the islands.

### **BLUE HERON FBO**

The environmental impact of aviation occurs because aircraft engines emit heat, noise, particulates and gases which contribute to climate change and global dimming. Airplanes emit particles and gases such as carbon dioxide (CO<sub>2</sub>), water vapor, hydrocarbons, carbon monoxide, nitrogen oxides, sulfur oxides, lead, and black carbon which interact among themselves and with the atmosphere.
