Computed Tomography Physical Principles Clinical

As a routine screening evaluation after a re-vascularization procedure (PTCA with stenting or CABG) at an interval of less than 2 years from the procedure if there is no worsening in the members symptomatology and if the member had symptoms prior to the intervention, and there is no history of congestive heart failure.

Computed tomography (CT) scanning of the head uses a series of x-rays of the head taken from many different directions; the resulting data is transformed into a series of cross sections of the brain using a computer program. CT images of the head are used to investigate and diagnose brain injuries and other neurological conditions, as well as other conditions involving the skull or sinuses ...

A CT scan, also known as computed tomography scan, and formerly known as a computerized axial tomography scan or CAT scan, makes use of computer-processed combinations of many X-ray measurements taken from different angles to produce cross-sectional (tomographic) images (virtual "slices") of specific areas of a scanned object, allowing the user to see inside the object without cutting.

Basic Principles of Computed Tomography Physics and Technical Considerations Kyongtae T. Bae Bruce R. Whiting INTRODUCTION Slightly more than three decades old, computed tomography (CT) continues to advance rapidly in both imaging performance and widening clinical applications. An appreciation of the potential of CT and its limitations can be obtained with an understanding of basic...

x Long-term complications of radiotherapy are an emergent clinical problem. We performed a 3-year long observation study of patients with breast cancer in whom we evaluated biochemical and dose-volume histogram variables and correlated those with echocardiographic evaluation at follow-up.

Sprawls Global Collaborative Teaching Network. Learning physics is a natural human process by which a person can observe and interact with parts of the physical universe, such as x-radiation, and having an experienced physicist guiding the activity.. Teaching is the process of helping someone learn. There are typically two components of teaching.

Cellular Effects of Radiation. Radiation therapy uses ionizing radiation, which means that the radiation's energy is sufficient to remove an electron from the outer shell of an atom (more than 124 electron volts). 1 In clinical therapy, photon radiation is most commonly generated by linear accelerators or gamma-ray sources that produce a range of ionizing photon energies.

Subdural hematoma (SDH) forms when there is hemorrhage into the potential space between the dura and the arachnoid membranes. SDH in children differs significantly from SDH in adults because abusive head injury is a common etiology, especially in pediatric patients <2 years of age [1]. In contrast ...

Acute ischemic stroke (AIS) is characterized by the sudden loss of blood circulation to an area of the brain, typically in a vascular territory, resulting in a corresponding loss of neurologic function. Also previously called cerebrovascular accident (CVA) or stroke syndrome, stroke is a nonspecific state of brain injury with neuronal dysfunction...
