ADVANCED COMPUTER ARCHITECTURE AND PARALLEL PROCESSING

Parallel Processing and Data Transfer Modes in a Computer System. Instead of processing each
instruction sequentially, a parallel processing system provides concurrent data processing to
increase the execution time.. In this the system may have two or more ALU's and should be able to
execute two or more instructions at the same time.

Parallel Processing and Data Transfer Modes | Computer ...

To improve the processing speed, methods are explored by which tasks involved in speech
understanding can be structured for execution on a parallel processing system. An architecture is
described ...

Computer Architecture and Parallel Processing by Kai Hwang

Key features extensive use of high-performance mainframe computers, attached vector processors,
scientific supercomputers, and multiprocessors to solve specific applications problems parallel
processing can be applied at the hardware/software system level or at the algorithmic and
programming level about the book: computer architecture and ...

Much of parallel computer architecture is about Designing machines that overcome the sequential
and parallel bottlenecks to achieve higher performance and efficiency Making programmer's job
easier in writing correct and high-performance parallel programs 37
