### **Connective Tissue Review Answers**

Connective tissue (CT) is one of the four basic types of animal tissue, along with epithelial tissue, muscle tissue, and nervous tissue. It develops from the mesoderm. Connective tissue is found in between other tissues everywhere in the body, including the nervous system. In the central nervous system, the three outer membranes (the meninges) that envelop the brain and spinal cord are composed ...

Edit March 16, 2017: This post was first written in early 2014. Since the new, much tighter criteria for the most common form of Ehlers-Danlos syndrome, hypermobile EDS now known as "hEDS" has just come out as of March 15th 2017 here, I would like to preface this by saying that I no longer will say that EDS is not rare per se, but that I still firmly believe the new category of Hypermobility ...
