Solids start to deform, when the shear force is applied, but it stops deforming after a certain limit is attained. And in solid, the stress is directly proportional to the strain, whereas, in fluid the stress is directly proportional to the strain rate. Thus, a solid differs from a fluid.

Description. Analysis In forced flow, the fluid is forced to flow over a surface or in a tube by external means such as a pump or a fan. In natural flow, any fluid motion is caused by natural means such as the buoyancy effect that manifests itself as the rise of the warmer fluid and the fall of the cooler fluid.

CHAPTER 5 BERNOULLI AND ENERGY EQUATIONS

As a fluid particle moves around in the flow, the material derivative of density must be zero for incompressible flow (no change in density following the fluid particle). Discussion The material derivative of any property is the rate of change of that property following a fluid particle.
