Turn on your robot. Place the robot on a flat, well-lit surface, then remove the piece of tape from the photoresistor. The robot should begin vibrating around the surface. Since the photoresistor is sensitive to light in general (not just sunlight), you'll want to cover the photoresistor when not using the robot.

### **How to Build a Simple Robot - wikiHow**

In order to build increasingly complex robots, most professionals and hobbyists use knowledge they have acquired when building previous robots. Instead of building one robot, you can learn how to use individual components with the objective of building your own "knowledge library" to use to undertake a larger, more complex design in the future.

How to Build a Robot: You will have to either buy robot parts or assemblies or build them from scratch which is often the cheaper way to go. Scratch-built is fine if you 1. have the time (and you will need quite a bit more time to scratch build) and 2. you have the SKILLS and TOOLS to scratch build.
