In physics, the Navier–Stokes equations (*/ n æ v ' j eɪ s t ɒ s k s /*), named after Claude-Louis Navier and George Gabriel Stokes, describe the motion of viscous fluid substances.. These balance equations arise from applying Isaac Newton's second law to fluid motion, together with the assumption that the stress in the fluid is the sum of a diffusing viscous term (proportional to the ...

An axial flow pump has a propeller-type of impeller running in a casing.The pressure in an axial flow pump is developed by the flow of liquid over the blades of impeller. The fluid is pushed in a direction parallel to the shaft of the impeller, that is, fluid particles, in course of their flow through the pump, do not change their radial locations.

Las ecuaciones de Navier-Stokes reciben su nombre de Claude-Louis Navier y George Gabriel Stokes.Se trata de un conjunto de ecuaciones en derivadas parciales no lineales que describen el movimiento de un fluido.Estas ecuaciones gobiernan la atmósfera terrestre, las corrientes oceánicas y el flujo alrededor de vehículos o proyectiles y, en general, cualquier fenómeno en el que se involucren ...
