Plasticity and Pathology: On the Formation of the Neural ...

Neuroplasticity is a primary property of the nervous system and is not only able to restore its function but can also alleviate the onset of developmental disorders. Neural plasticity appears in response to various internal and external causes, including stroke, epilepsy, neurodegenerative diseases, and pharmacological treatment (e.g., L-dopa, antiepileptic drugs).

In this Book. Central to the volume is a critical examination of the relationship between pathology and plasticity. Because pathology is often the occasion for neural reorganization and adaptation, it exists not in opposition to the brain's "normal" operation but instead as something intimately connected to our ways of being and understanding.

With the focus on microglial morphological responses to pathology, the concept of microglia as a "resting" or "quiescent" cell in the healthy CNS was developed in contradistinction to an "activated" cell in the pathological CNS.

Microglia: Key Elements in Neural Development, Plasticity ...

Brain development progresses through a series of stages beginning with neurogenesis and progressing to neural migration, maturation, synaptogenesis, pruning, and myelin formation. Eight basic principles of brain plasticity are identified.
