Proceedings Of Optical Biophysics Progress

Thin-film optics is the branch of optics that deals with very thin structured layers of different materials. In order to exhibit thin-film optics, the thickness of the layers of material must be on the order of the wavelengths of visible light (about 500 nm). Layers at this scale can have remarkable reflective properties due to light wave interference and the difference in refractive index ...

Thin-film optics - Wikipedia

Optics is the branch of physics that studies the behaviour and properties of light, including its interactions with matter and the construction of instruments that use or detect it. Optics usually describes the behaviour of visible, ultraviolet, and infrared light. Because light is an electromagnetic wave, other forms of electromagnetic radiation such as X-rays, microwaves, and radio waves ...

This issue covers the new and emerging area of cellulose nanotechnology. The papers presented demonstrate how cellulose nanofibers can be extracted from the cell walls of plants and then be utilised for a wide range of applications.

Star burst: a solar flare as seen by NASA's Solar Dynamics Observatory. (Courtesy: NASA/SDO) An intense blast of high-energy protons from the Sun pummelled the Earth in about 660 BC and left a distinct record of cosmogenic nuclei in the Greenland ice sheet. The discovery was made by an ...

Session/Tracks. With the magnificent success of Materials Congress 2018, we are proud to announce the 20 th World Congress on Materials Science and Engineering, to be held during June 24-26, 2019 at Vienna, Austria. Materials Congress 2019 is comprised of various tracks and sessions designed to offer comprehensive sessions that address current issues in the field of Materials Science.
