Stein And Shakarchi Solutions Real

In preparation for a qualifying exam in Real Analysis, during the summer of 2013, I plan to solve as many problems from Stein & Shakarchi's Real Analysis text as I can. Please feel free to comment or correct me as I make my way through this.

Real Analysis is the third volume in the Princeton Lectures in Analysis, a series of four textbooks that aim to present, in an integrated manner, the core areas of analysis. Here the focus is on the development of measure and integration theory, differentiation and integration, Hilbert spaces, and Hausdorff measure and fractals. This book reflects the objective of the series as a whole: to ...

With this second volume, we enter the intriguing world of complex analysis. From the first theorems on, the elegance and sweep of the results is evident. The starting point is the simple idea of extending a function initially given for real values of the argument to one that is defined when the argument is complex. From there, one proceeds to the main properties of holomorphic functions, whose ...

Some Solutions to Stein & Shakarchi's Real Analysis: 2.10

The Princeton Lectures in Analysis is a series of four mathematics textbooks, each covering a different area of mathematical analysis. They were written by Elias M. Stein and Rami Shakarchi and published by Princeton University Press between 2003 and 2011.

In particular, open sets are Lebesgue measurable and sets of outer measure 0 are Lebesgue measurable. Remark 2.1. Alternatively, can characterize measurable sets as follows: for all $\epsilon > 0$, there exists closed $C \subseteq E$ such that $m(E \setminus C) < \epsilon$. This will be shown by checking that measurability is preserved under taking complements.
